

SHIVANSH RAI

Node.js Backend & Full-Stack (MERN) Developer

raishivansh09@gmail.com | +91-8602643669 | Indore, India | linkedin.com/in/Shivansh

PROFESSIONAL SUMMARY

Software Developer with hands-on MERN stack experience and a strong focus on Node.js/Express backend development. Skilled in designing REST APIs, structuring middleware pipelines, modeling data in MongoDB, and building automation workflows on the Node.js runtime (N8N, Zapier, ViaSocket, MCP-based AI agents) — with a focus on clean, maintainable, scalable server-side code.

WORK EXPERIENCE

Software Developer — Walkover Web Solution

05/2025 – 08/2026

ViaSocket Product Team · Indore | Platforms: ViaSocket & Gtwy.ai (automation and AI platforms)

- Worked across the MERN stack on ViaSocket and Gtwy.ai, contributing to both React-based UI features and backend REST API integration, within a Node.js/Express service architecture.
- Integrated frontend components with backend REST APIs, handling request/response cycles, loading, error, and real-time states — working closely with the API contracts, status codes, and authentication flows exposed by the Node.js backend services.
- Built and maintained the ViaSocket Embed page, which exposes ViaSocket's automation and API integration capabilities to partner applications through embeddable, API-driven components.
- Contributed to AI-assisted internal tools and workflows built on AI Agents, LLM-driven automation, and the Model Context Protocol (MCP) — designing request/response flows between agents and backend services.
- Designed and deployed 300+ automation workflows using N8N, Zapier, and ViaSocket, including webhook-based integrations that trigger and consume REST APIs across third-party services — now live in production.
- Built plugins on top of ViaSocket's automation platform by integrating 100+ third-party REST APIs, enabling reusable, API-driven building blocks for end-user workflows.
- Improved core user flows and resolved UI/integration bugs, strengthening responsiveness and stability; collaborated closely with backend, product, and design teams to plan API contracts and ship features.

PROJECTS

Food Ordering Website — React, JavaScript, Node.js, Express, MongoDB

- Built a full-stack, responsive food ordering and checkout application with a Node.js/Express backend and a modular React frontend.
- Designed and implemented REST APIs in Node.js/Express to handle menu retrieval, restaurant listings, and order creation/management, with clear route → controller → model separation.
- Modeled MongoDB schemas for menus, restaurants, and orders, supporting category-based browsing, dynamic price calculation, and cart/checkout state tied directly to backend API responses.

QuickRide — Taxi Booking Platform — HTML, CSS, JavaScript, Node.js, Express, MongoDB

- Developed a Node.js/Express backend exposing REST APIs for ride booking, driver availability, and user management, serving separate rider and driver interfaces.
- Designed MongoDB schemas to store and query users, drivers, and booking records efficiently; built mobile-first, reusable frontend components consuming these APIs for fast cross-device performance.

TECHNICAL SKILLS

Backend & APIs: Node.js, Express.js, REST API design, middleware & routing, API debugging (Postman)

Frontend: React, JavaScript, responsive UI development

Databases: MongoDB (schema design, Mongoose-style modeling), MySQL, DBMS fundamentals

Automation & AI: AI Agent development, Model Context Protocol (MCP), N8N, Zapier, ViaSocket, webhook-based integrations

Languages: JavaScript, C, C++

Tools: Git, GitHub, VS Code, Postman

EDUCATION

MCA — Rajiv Gandhi Proudhyogiki Vishwavidyalaya

2023 – 2025

B.Sc — Government MVM College, Bhopal

2020 – 2023

ACHIEVEMENTS & CERTIFICATES

- Training and Placement Student Coordinator
- Introduction to MongoDB for Students
- CyberOps Associate

Hobbies: Photography • Traveling & exploring new places
